

INTERCEPT[®] ORAL FLUID TEST

Discover the oral fluid solution to modern drug testing

The Intercept[®] oral fluid drug test system provides a smart alternative to inconvenient and often embarrassing drug testing procedures. Unlike urine samples, oral fluid samples can be collected anywhere, anytime.

EMPLOYEE DIGNITY

The act of urinating in a cup can be awkward for both the person being tested and the collector. The Intercept service delivers a safer, more dignified and observable collection method along with the same quality, accuracy and reliability of traditional urine testing.

MINIMIZE ADULTERATION

Drug users have many options to adulterate a urine test. The Intercept oral fluid drug test nearly eliminates the risk of adulteration. It's virtually impossible for donors providing oral fluid samples to mask drugs in their system. Besides, oral fluid collections can always be directly observed. "Beating the system" just became more difficult.

COST SAVINGS

With urine-based testing, you are paying not only for test results, but also often for collection, scheduling, supervision, and training. Add to that the downtime while your employee or candidate visits an off-site collection facility across town. Multiply your costs and hours by the number of employees you test each month and it adds up quickly. With the Intercept test, you reduce or eliminate collection fees, minimize scheduling issues, and greatly reduce lost work time. The improvements to your company's bottom-line will be noticeable.

LABORATORY TESTED AND REVIEWED

Intercept's FDA-approved method follows chain of custody procedures. The collected specimen is tested at LabOne, a DHHS certified lab, and results are reviewed by expert MROs.

DRUGS TESTED

This testing service detects the following "NIDA-5" drug panel:

- Marijuana (THC)
- Cocaine
- Opiates
- Amphetamines
- PCP

FEATURES:

-  Detects most common drugs requested by employers for workplace drug testing
-  Identifies recent usage
-  Donor collects their own sample under direct visual supervision
-  No special collection facilities

BENEFITS:

-  NIDA-5 drug panel marijuana, cocaine, opiates, amphetamines, and PCP
-  Detection window in oral fluid is about one-to-three days
-  More dignified and observable collection method
-  Oral fluid samples can be collected anywhere, anytime
